

My life My Legacy

His job is to do what has never been done before.

Michael Bottlang, Ph.D., is the director of the Biomechanics Laboratory at Legacy Research Institute.

He and his team develop technologies that save lives.

Michael, a biomechanical engineer, and surgeon Steven Madey, M.D., started the lab 14 years ago.

"The basis for successful biomechanical research is an interdisciplinary relationship between an engineer and a surgeon."

The son of an engineer, Michael decided he wanted to follow in his dad's footsteps, and apply his skills in a way that benefits people's health.

Away from the lab, Michael enjoys spending time outdoors with his wife, Deborah, and two children, Adam and Anika.

This is his life. And this is his Legacy

Our legacy is yours.
